Directive 2011/65/EU of the European Parliament and the Council of 8 June 2011 on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment
(RoHS2 – Restriction of the Use of Hazardous Substances)

For a number of years now, KELLER AG für Druckmesstechnik has endeavoured to minimise the potential environmental hazards arising from its own production and/or from our products.

Pursuant to Article 4 of RoHS2, industrial monitoring and control instruments will continue to be exempted from the stipulations set forth in RoHS until 22 July 2017. It is our view that all of our products fall into this category. Nevertheless, we are making intensive efforts to comply with the conditions required for a changeover to lead-free soldering.

It is possible that the changeover to lead-free soldering will entail changes to the characteristics of a product and/or (in extreme cases) structural design changes. We are therefore requesting individual consultation regarding those products which we should change over to lead-free soldering.

Winterthur, 03.01.13
